Website Project Proposal: Paws Haven Animal Rescue

1. Organisation Overview

Organisation Name: Paws Haven Animal Rescue

Paws Haven Animal Rescue is a fictional Cape Town-based non-profit organisation established in 2019 to rescue, rehabilitate and rehome abandoned, abused and neglected animals. The organisation provides temporary shelter, veterinary care, food and adoption services for animals in need.

Mission: To rescue vulnerable animals and provide them with compassionate care while finding them safe and loving permanent homes.

Vision: To create a community where every abandoned or abused animal has the opportunity to live a safe and healthy life.

The target audience includes potential adopters, animal lovers, volunteers, donors, sponsors and members of the local community.

2. Website Goals and Objectives

The website will increase awareness of Paws Haven, encourage animal adoptions, attract volunteers and increase donations. It will provide visitors with accessible information about available animals and ways to support the organisation.

Key performance indicators (KPIs) will include website visitors, adoption enquiry submissions, donation enquiries, volunteer registrations and contact-form submissions.

3. Current Website Analysis

Paws Haven currently relies mainly on social media and has no dedicated website. This limits the organisation's ability to provide detailed information in one location and makes it difficult for potential adopters and donors to find reliable information. The proposed website will address these weaknesses through clear navigation, regularly updated animal profiles and dedicated donation and adoption sections.

4. Proposed Website Features and Functionality

The website will include a **Home, About Us, Service, Stories, and Contact** page. Animal profiles will display photographs, names, ages, descriptions and adoption information.

5. Design and User Experience

The proposed colour palette will use **white, warm beige, blue and dark brown**, creating a welcoming and natural appearance. The layout will be clean, responsive and image-focused, with simple navigation and prominent calls-to-action.

Low-fidelity wireframes will show the information hierarchy for the homepage, including the navigation bar, hero section, featured animals, donation/adoption calls-to-action and footer.

6. Technical Requirements

The website will use **HTML5, CSS3 and JavaScript**. A responsive design will ensure compatibility with smartphones, tablets and computers. A domain name such as **pawshaven.org.za** and reliable web hosting will be required.

7. Timeline and Milestones

Week 1: Research and requirements

Week 2: Wireframes and proposal

Week 3: Visual design and content

Weeks 4–5: HTML, CSS and JavaScript development

Week 6: Testing and corrections

Week 7: Final documentation and submission

The milestones will be adjusted to match the subject's official submission dates.

8. Budget

Estimated costs include **R300–R500 per year for domain registration, R1,000–R2,000 per year for hosting**, and approximately **R500–R1,000 per year for maintenance and updates**. Development will be completed as an academic project, reducing development costs for the non-profit organisation.
