Module Name: WEB DEVELOPMENT(INTRODUCTION)

Module Code: WEDE5020
Lecturer: Morne Coetzee
Student Code: ST10522714
Student Name: Iman Nolly

Part 3- Website Enhancement and Functionality

Platform used to deploy website: Netlify
Link: https://velvety-frangipane-734760.netlify.app

Github Link: https://github.com/ImanNolly/WEDE5020.git

The changes made to the Paws Haven Animal Rescue website include:

1. Website Pages Added

- Created an About page (`about.html`) containing information about the animal shelter.
- Created a Services page (`services.html`) outlining the services provided by the shelter.
- Created a Stories page (`stories.html`) featuring animal rescue and adoption stories.
- Created a Contact page (`contact.html`) providing contact information and an enquiry form.

2. Homepage Improvements

- Preserved the original homepage structure and visual appearance.
- Retained the original PHAR branding, logo and background image.
- Maintained the original navigation bar, headings, colours and buttons.
- Improved the organisation and structure of the homepage content.

3. CSS and Design Improvements

- Extended the original stylesheet (`style.css`) to accommodate the additional pages.
- Maintained consistent styling across all website pages.
- Added responsive styling to improve the website's appearance on different screen sizes and devices.
- Improved page layouts and content organisation.

4. JavaScript Functionality

- Added a JavaScript file (`script.js`) to introduce interactive website features.
- Implemented navigation functionality.
- Added search functionality.
- Added form validation to improve the handling of user input.
- Introduced additional interactive elements throughout the website.

5. SEO and Website Improvements

- Added basic SEO improvements, including page titles and meta descriptions.
- Improved HTML content structure and organisation.

- Improved the overall usability and navigation of the website.

6. GitHub and Deployment

- Created a separate updated project folder named `PHAR-original-extended`.
- Connected the updated project to the existing GitHub repository (`WEDE5020`).
- Committed and pushed the updated website files to the `master` branch.
- Successfully deployed the website using Netlify.
- Made the website publicly accessible through a Netlify-hosted URL.

Files Added/Updated:

- `index.html`
- `about.html`
- `services.html`
- `stories.html`
- `contact.html`
- `style.css`
- `script.js`
- `images/` (website images and assets)

Overall:

The website was expanded from a HTML and CSS project into a multi-page website with JavaScript functionality, improved responsiveness, basic SEO enhancements and successful online deployment.
